subject to a cancellation fee.

PAYMENT

You may pay this invoice online at: www.roilog.com

This is your invoice for providing the copies of the medical records.

You can send a check to:

MRO
P.O. Box 6410,
Southeastern, PA 19398-6410
MRO Tax ID (EIN): 01-0661910

Please write invoice # on the check or
return this invoice with the payment

By proceeding with this order, you are representing that you: have reviewed, understood, and approved the charges; have agreed to pay them; and have agreed to the following terms. Any dispute relating to the charges in this invoice must be presented before proceeding with this order. Any dispute not so presented is waived. Presentation of a dispute must be made by telephone (610) 994-7500 Opt. 1. All disputes regarding the charges in this invoice, whether presented by you or by MRO, must be resolved by arbitration under the Federal Arbitration Act through one or more neutral arbitrators before the American Arbitration Association (AAA). Your dispute will be resolved by the arbitrators, and not by a judge or a jury. Class arbitrations are not permitted. Disputes must be brought only in the claimant's individual capacity and not as a representative or member of a class. An arbitrator may not consolidate your dispute with the dispute of anyone else nor preside over any form of class proceeding. Upon request by you at the time a dispute is presented, MRO will pay the AAA fee for arbitration of your dispute.

Please contact MRO at (610) 994-7500 Opt. 1 for any questions regarding this invoice.

MRO is the medical copy request processor for: UC San Diego Medical Center.

Emergency Medicine Resident Note

Chief Complaint

Patient presents with

- Neck Pain
back
- Back Pain

Sent from jail for eval of cervical spine herniations. Paresthesia to right and left hand, left foot

HPI:

Michael Gordon Douglas is a 47 year old male with a history of C6-7 and L4-5 disc herniation after a traumatic fall in December of 2022 who complains of changes in his neurologic symptoms after his cell-mate slapped and twisted his head and gave him a bear hug yesterday. His chronic neurologic symptoms were mostly isolated to the right 1st and 2nd finger but he now has n/t radiating from his neck down the left side to his hand and n/t in his entire right hand and along his left leg. He also complains of some associated weakness mostly isolated to grip strength and reports unintended dropped items. He denies urinary retention, constipation, loss of incontinence, and saddle anesthesia. He has not had fever recently, and there is no history of malignancy. He denies a history of IV drug use.

hand muscles. 5/5 strength right upper extremity and bilateral lower extremities.

Labs:

No results found for this or any previous visit.

Imaging:

No results found.

Procedures:

No orders of the defined types were placed in this encounter.

Medications Given:

Medications - No data to display

Assessment & Plan:

Michael Gordon Douglas is a 47 year old male with a history of C6-7 and L4-5 disc herniation after a traumatic fall in December of 2022 who complains of changes in his neurologic symptoms after his cell-mate slapped and twisted his head and gave him a bear hug yesterday. Patient is overall well-appearing, afebrile, and ambulatory. There is no numbness, pain or weakness in the legs, urinary retention, or loss of continence. There are no red flags such as fever, history of malignancy, or previous IV drug use.

- labs: BMP, CBC,
- imaging: CT head, CT neck, MRI neck
- pain control

ED Course:

- CT head and neck negative for any acute pathology
- MRI demonstrating moderate-severe spinal canal stenosis at C5-C6 and moderate spinal canal stenosis at C6-C7 secondary to background congenital spinal canal narrowing with superimposed degenerative changes

Patient's history, physical exam and imaging are consistent with exacerbation of underlying chronic degenerative changes of the cervical spine. Prescribed Flexeril 5 mg PO daily for 14 days. Follow up with outpatient spine surgeon for further evaluation and treatment.

The patient indicates understanding of these issues and agrees to the plan.

Overall Impression: Cervical spine central canal stenosis

Consults: None

Disposition: Return to incarceration

No orders of the defined types were placed in this encounter.

Screening Form Questions

No questions have been answered for this form.

Additional Information

MRI Scanners produce loud sounds during the process of obtaining images. These sounds can cause discomfort for some patients. Hearing protection will be offered to all patients prior to beginning the procedure.

Please initial as your acknowledgement:_____

MRI scanners may cause heating of tissue, including skin. Notify the technologist immediately if you notice any heating sensation during your scan.

Please initial as your acknowledgement:_____

Tattoos have been reported to cause skin irritation, swelling and/or heating in a small number of patients. Inform the technologist of any tatoos or permanent makeup prior to your scan. Please initial as your acknowledgement:_____

In order to obtain images appropriate for your condition, your MRI scan may require an injection of a contrast media. This media is approved by the Food and Drug Administration for intravenous injection during the performance of MRI imaging. As with any intravenous injection, there is a risk of allergic reaction. The percentage of patients with reaction is extremely low. Patients receiving contrast may experience headaches and mild nausea, although the incidence of reaction is extremely low. Rarely, patients may experience local inflammation at the injection site. Another side effect is gadolinium retention or NSF. Please initial as your acknowledgement:_____

If this form is being completed by someone other than the patient, please print your name and relationship:

CT Head W/O Contrast [555340290]

Resulted: 01/10/24 2008, Result status: Final result

Ordering provider: Villano, Janna Hoffman, MD 01/10/24 1910
Resulted by: Elhalwagi, Shereef Baher, MD

Order status: Completed
Filed by: Electronic Interface To Epic, Radiant Results
01/10/24 2011
Accession number: 57392466

Performed: 01/10/24 1917 - 01/10/24 1921
Resulting lab: RADIOLOGY

Narrative:

EXAM DESCRIPTION:

CT HEAD W/O CONTRAST: 1/10/2024 7:21 pm

CLINICAL HISTORY:

Head trauma

TECHNIQUE:

Head CT was performed without intravenous contrast.

Up-to-date CT equipment and radiation dose reduction techniques were employed. CTDIvol: 12.6 - 59.1 mGy. DLP: 1395 mGy-cm.

The following accession numbers are related to this dose report {57392466}:
57392465

COMPARISON:

None available

FINDINGS:

There is no evidence of intracranial hemorrhage. Gray-white matter differentiation is preserved; no hyperdense vessel. No mass-effect or midline shift is present, and the basal cisterns are patent. Brain volume is within normal limits. No hydrocephalus. No extra-axial collections.

No acute calvarial or skull base fracture or other bone abnormality. Soft tissues of the scalp are normal. Left maxillary mucosal retention cyst. Mastoid air cells are clear.

CONCURRENT SUPERVISION:

None

01/10/2024 - ED in Hillcrest Emergency (continued)**Orders - All Imaging (continued)****DOSE STATEMENT:**

UC San Diego Health System CT scanners employ modern techniques for CT dose reduction, including protocol review, automatic exposure control, and iterative reconstruction techniques. These features assure that radiation dose levels in CT are optimized and are consistent with state-of-the-art, low dose CT practice.

Signed by: Elhalwagi, Shereef 01/10/2024 20:08:49

Impression:

IMPRESSION:

No acute intracranial hemorrhage, mass effect, hydrocephalus, extra-axial collection, or evidence of large territorial infarct.

Screening Form Questions

No questions have been answered for this form.

Additional Information

MRI Scanners produce loud sounds during the process of obtaining images. These sounds can cause discomfort for some patients. Hearing protection will be offered to all patients prior to beginning the procedure.

Please initial as your acknowledgement:_____

MRI scanners may cause heating of tissue, including skin. Notify the technologist immediately if you notice any heating sensation during your scan.

Please initial as your acknowledgement:_____

Tattoos have been reported to cause skin irritation, swelling and/or heating in a small number of patients. Inform the technologist of any tatoos or permanent makeup prior to your scan. Please initial as your acknowledgement:_____

In order to obtain images appropriate for your condition, your MRI scan may require an injection of a contrast media. This media is approved by the Food and Drug Administration for intravenous injection during the performance of MRI imaging. As with any intravenous injection, there is a risk of allergic reaction. The percentage of patients with reaction is extremely low. Patients receiving contrast may experience headaches and mild nausea, although the incidence of reaction is extremely low. Rarely, patients may experience local inflammation at the injection site. Another side effect is gadolinium retention or NSF. Please initial as your acknowledgement:_____

If this form is being completed by someone other than the patient, please print your name and relationship:

Filed by: Electronic Interface To Epic, Radiant Results
01/10/24 2021

Performed: 01/10/24 1917 - 01/10/24 1923
Resulting lab: RADIOLOGY

Accession number: 57392465

Narrative:

EXAM DESCRIPTION:

CT C-SPINE W/O CONTRAST

CLINICAL HISTORY:

Neck trauma, not high-energy; injury

TECHNIQUE:

Helical CT was obtained from the skull base through the upper chest without contrast and reconstructed in axial, sagittal, and coronal planes using soft tissue and bone window algorithms.

Up-to-date CT equipment and radiation dose reduction techniques were employed. CTDIvol: 12.6 - 59.1 mGy. DLP: 1395 mGy-cm.

The following accession numbers are related to this dose report {57392465}:
57392466

COMPARISON:

None

FINDINGS:

There is no acute fracture or subluxation. The vertebral body heights are maintained. Spinal alignment is preserved.

The intervertebral disc spaces are normal. Minimal facet arthrosis uncovertebral joint hypertrophy there is no significant neuroforaminal narrowing or spinal canal stenosis.

The paravertebral soft tissues are normal. The visualized portions of the lung apices are unremarkable.

CONCURRENT SUPERVISION:

I have reviewed the images and agree with the resident's interpretation.

Signed by: Elhalwagi, Shereef 01/10/2024 20:19:17

Impression:

IMPRESSION:

No acute abnormality of the cervical spine. Minimal cervical spondylosis

Douglas, Michael Gordon
MRN: 32401190, DOB: 9/28/1976, Sex: M
Adm: 1/10/2024, D/C: 1/10/2024

01/10/2024 - ED in Hillcrest Emergency (continued)**Orders - All Imaging (continued)****FINDINGS:**

The cervical alignment is intact. The vertebral body heights and marrow signal are within normal limits. The visualized posterior fossa and craniocervical junction are intact. The intrinsic cervical cord signal appears intact. There is no prevertebral soft tissue swelling. The visualized paraspinal soft tissues are otherwise unremarkable. The flow voids in the neck are preserved. Borderline congenital narrowing of the spinal canal.

The following axial levels are detailed below:

C2-C3: No significant posterior disc disease. No spinal canal stenosis. No significant neural foraminal narrowing.

C3-C4: No significant posterior disc disease. Mild bilateral facet/uncovertebral arthropathy. No spinal canal stenosis. Mild-moderate right-sided neural foraminal narrowing. No significant left-sided neural foraminal narrowing.

C4-C5: No significant posterior disc disease. Mild bilateral facet/uncovertebral arthropathy. No acquired spinal canal stenosis. Mild right-sided neural foraminal narrowing. No significant left-sided neural foraminal narrowing.

C5-C6: Minimal posterior disc-osteophyte complex as well as mild bilateral facet/uncovertebral arthropathy and ligamentum flavum infolding. Moderate acquired spinal canal stenosis with minimal contouring of the ventral cord. No significant neural foraminal narrowing.

C6-C7: Minimal posterior disc-osteophyte complex as well as mild bilateral facet/uncovertebral arthropathy and ligamentum flavum infolding. Mild acquired spinal canal stenosis. Mild left-sided neural foraminal narrowing. No significant right-sided neural foraminal narrowing.

C7-T1: No significant posterior disc disease. No spinal canal stenosis. Mild bilateral neural foraminal narrowing in the setting of facet arthropathy.

T1-T2: Unremarkable.

CONCURRENT SUPERVISION:

I have reviewed the images and agree with the fellow's interpretation.

Preliminary created by: Brown, Dustin; St Louis, Derek

Signed by: Farid, Nikdokht 01/11/2024 14:29:05

Impression:

IMPRESSION:

1. Multilevel degenerative changes of the cervical spine, as detailed with up to moderate spinal canal stenosis at the C5-C6 level, where there is minimal contouring of the ventral cord. No cord signal abnormality in this location or within the remainder of the cervical cord.

2. No high-grade neuroforaminal stenosis.

CERVICAL RADICULOPATHY - WITH REFERRAL TO NEUROSURGEON (ENGLISH)

Cervical Radiculopathy

You have been seen for a cervical radiculopathy.

Your spine has bones called "vertebrae." In between the bones there are soft cushions. These are called "disks." The disks keep the vertebrae from rubbing against each other. Inside of each disk is a thick, jelly-like substance called the "nucleus pulposus." Sometimes when the spine is injured, a disk is damaged and the nucleus pulposus leaks out of the disk. This is called a "disk herniation." As people age, the disks get brittle and delicate. If this happens, you might have a disk herniation. This is possible even if you don't remember getting injured.

Sometimes a herniated disk presses on a nerve in the spine. This causes pain near the herniated disk. Since you have symptoms in your neck and arm, the problem is in the cervical (neck) spine. Other problems can cause a radiculopathy (nerve pain), including a narrowed opening where the nerves come out.

Some symptoms of a cervical radiculopathy are:

- Pain down one of your arms.
- A burning feeling down your arm.
- Numbness (pins and needles or loss of feeling) in your arm.
- In serious cases, your arm may feel weak.

This problem is often treated with rest, physical therapy, and medication for the swelling and pain. If these treatments don't work, surgery may be needed. Sometimes taking steroids (like Prednisone) for a few days can help the pain.

We don't believe your condition is dangerous right now. However, you need to be careful. Sometimes a problem that seems small can get serious later. Therefore, it is very important for you to come back here or go to the nearest Emergency Department if you don't get better or your symptoms get worse.

You have been referred to see a neurosurgeon. This does not necessarily mean that you will need surgery. This doctor can look at your problem and make recommendations for more tests or treatment.

You may have been referred to get an MRI of your spine or an EMG. These tests look at your problem more closely.

Follow up with your doctor or the referral doctor as soon as possible.

YOU SHOULD SEEK MEDICAL ATTENTION IMMEDIATELY, EITHER HERE OR AT THE NEAREST EMERGENCY DEPARTMENT, IF ANY OF THE FOLLOWING OCCURS:

- You lose bowel or bladder control (you soil or wet yourself).
- You feel weak or can't use your arm(s).
- The medication doesn't help the pain.
- You have a fever (temperature higher than 100.4°F or 38°C) or shaking chills.
- You have serious pain over one bone (vertebra) in your neck.

Be Fast! Know stroke warning signs

Remember **BE FAST** for warning signs of stroke. These symptoms may represent a serious problem that is an emergency. Do not wait to see if the symptoms will go away. Get medical help right away. Call 911. Do not drive yourself to the hospital. Get help right away if you or a loved one has any of these signs.

Hang this image on your fridge for quick and easy reference!

Additional Information

For more information about any of your health conditions, logon to your MyChart and search our Health Library section or visit our website at <http://health.ucsd.edu/healthinfo>

If you or a loved one would like information on how to quit smoking or about suicide prevention, call:

- Kick It California (Smoking and Vaping Cessation): 1-800-300-8086
- National Suicide Prevention Lifeline: 1-800-273-TALK (8255)
- San Diego Access and Crisis Line: 1-888-724-7240

Prepare For Your Care

UC San Diego Health asks all of our patients to have a voice in your medical care by spending a few moments on <https://prepareforyourcare.org> where you can learn about and complete your advance directives in just a few easy steps.

Billing and Insurance Information

We're here to help. For billing questions. Call **855-827-3633**, 9a.m. to 6 p.m. Weekdays, or email askus@ucsd.edu

Your feedback is important to us

We strive to provide every patient with an exceptional patient care experience. In the next few days, you may receive a paper, email or phone survey about your most recent visit. Your feedback is important to us, and we ask that you please complete this survey to help us improve the experience at UC San Diego Health for all of our patients. You may also call our We Listen line at (619) 543-5678 if you want to share a positive experience you had at our facility or if you have suggestions about how we can improve our services. Please call your physician's office for any medical concerns. **If you have a medical emergency, call 911.** Thank you!
